

King Prawn/Flounder Light

PANLED, Rechargeable: Light N' Easy

- Genuine, American Cree LED providing maximum brightness & reliability
- Red filter for prawn attraction.
- Lithium Ion battery with spare providing a total of 8 Hrs run time before recharge. Can also run on 2 x CR123A batteries if charging point is not available.
- Rechargeable 12V-24V & 100-240V and suitable for international use.
- Light N' Easy without the need for a power pack & floatation device and extra pair of hands.
- Marine grade telescopic arm and adjustable angle on the torch holder.
- The torch can be removed and used as a powerful torch (comes with pouch) or bike light with ASC-02 bike bracket (Optional)

Cat No.RCTFLO

Marine grade King Prawn Flounder Light with extendable arm, swivel head, and accepts the Hot Shot rechargeable torch which is waterproof to 3 metres, uses genuine American Cree LED, the brightest so far for this size.

A red filter is provided to attract prawns. With two Lithium-ion batteries and 240V, 12V- 24V chargers can obtain a total run time of 8 HRS by exchanging the batteries: one can be charged up while the other is being used. The charger is suitable for international use and accepts 100V to 240V power supply. The internal regulator in the torch will also allow the use of 2 x CR123 batteries in case you are stranded without a charging point.

With the optional bike bracket you can become the complete amphibian: prawn/flounder lighting, surf lighting (poke handle in the sand) and by detaching the Hot Shot, walking; and cycling at night, but by far the greatest advantage apart from it's brightness, is its lightness and portability: you don't need the bulk, weight and cost of a power pack to drag you down.
